60      0060 1  V03-007 MLJ0107      Martin L. Jack, 4-Apr-1983 13:19

76      0076 1  V03-002 MLJ0084      Martin L. Jack, 25-Mar-1982 21:32
77      0077 1  Use a random sequence number rather than the next sequential
78      0078 1  sequence number when rewriting a bad header with a deleted
79      0079 1  header. This tracks a policy change in the ACP.

91      0091 1
92      0092 1  V02-004 MLJ0061      Martin L. Jack, 30-Nov-1981 10:31

96      0096 1  Issue message if lost files not entered. Add /USAGE qualifier
97      0097 1  to generate disk-accounting data file. Issue message if
98      0098 1  directory file not named '.DIR:1'. Implement complete storage
99      0099 1  control block validation and reconstruction. Use $GETDVI. Add
100     0100 1  checks for quota file attributes.

106     0106 1  Consider alternate index file header invalid only if it fails
107     0107 1  basic validation or if the map areas or EFBLK differ. Change
108     0108 1  listing default name string so that /LIST=LP: has a reasonable
109     0109 1  file name. Write-access the quota file to flush the ACP cache.
